

DECK STAND

Our **Deck Stand** is made of steel construction with rugged coating system which comprises epoxy primer with rust preventive pigments and epoxy enamel topcoat.

Position indication is provided by a pointer affixed to a bronze nut that travels along the internal stainless steel stem secured with externally threaded sleeve. Two end-stoppers are in place to avoid damage of pointer due to over travel.

Weatherproof housing is fully enclosed with lip seal and sealant to prevent water and foreign particles from damaging the internal stem thread, coupled with permanently lubricated bearing for better performance and maintenance-free operation.

Options:

- Water-tight sealing, in the form of adjustable gland packing, is suitable for installations above tanks.
- Common types of limit switches can be incorporated onto our deck stand to provide remote signals for valve position monitoring.
