

Universal Joint

Machined from bar stock in stainless steel 304 or 316 for greater corrosion resistance, our **Universal Joint** provides smooth operation and long life due to large bearing surface and well-controlled tolerances between mating parts.

A wide variety of modifications is available for our universal joint, such as different sizes of bore, keyway, square hole and hex hole for each individual hub. Our fabrication processes are designed to produce low volume quantities and made to order custom parts just as cost effective as high volume standard universal joints.
